## The value of a hypothetical 100,000 AUD investment

### Past results are not a guarantee of future results.

Fund results are shown after fees and expenses and are calculated as the increase or decrease in net asset value over the relevant period. Results based on month-end NAV and on the assumption that any distributions are reinvested. See glossary for details. Performance is shown for the past 5 years or since inception of fund launched within the period. Please refer to page 1 for more information on indices, where applicable.

**Asset class**

A group of financial instruments which have similar financial characteristics and behave similarly in the market place. Examples include fixed income, equity and multi-asset.

**Derivatives**

A derivative is a contract between two or more parties whose value is based on an agreed-upon underlying financial asset (like a security) or set of assets (like an index). Common underlying instruments include bonds, commodities, currencies, interest rates, market indexes, and stocks.

**Dividend**

A sum of money paid regularly by a company to its shareholders out of its profits (or reserves).

**Effective duration**

Effective duration provides a measure of interest-rate sensitivity. The longer duration is, the more sensitive to shifts in interest rates.

**Emerging market**

An emerging market economy is the economy of a developing nation that is becoming more engaged with global markets as it grows.

**EMD**

Emerging market debt (EMD) is a term used to describe bonds issued by countries with developing economies as well as by corporations within those nations.

**Equity**

Shares of ownership in a company.

**Fixed income securities**

A debt instrument issued by a government, corporate or other entity.

**Fund**

A financial vehicle made up of a pool of money collected from many investors to invest in securities such as stocks and bonds.

**Futures**

Financial contracts under which an agreed price for an asset must be transacted at a certain time regardless of the asset's current market value.

**Hedging**

A method of reducing unnecessary or unintended risk, in this case particularly as it pertains to currency.

**High yield**

A high yield bond is one with a lower credit rating than an investment grade bond. High yield bonds typically offer a higher rate of interest because of a greater risk of default.

**Index**

An index represents a particular market or segment of it, and is a tool used to describe the market and compare returns on specific investments.

**International Securities Identification Number (ISIN) Code**

A code that uniquely identifies a specific securities issue.

**Liquidity**

Liquidity describes the degree to which an asset or security can be quickly converted into cash without a significant concession in price.

**Net asset value (NAV)**

The month-end NAV is an additional, information-only NAV of the fund. It is calculated on the last week-day of the month, using the same methodology as used by indices, to enable investors to carry out comparisons with relevant benchmarks. No dealing activity can be based on such net asset value per share.

**Operating currency**

The operating currency of a mutual fund refers to the currency in which the fund's net asset value (NAV) is calculated.

**Securitized**

Financial securities that are created by securitising individual loans (debt).

**Standard deviation**

Standard deviation is calculated after fees and is a measure of how much an investment's returns can vary from its average return.

**Total return**

The overall actual rate of return of an investment over a given evaluation period.

**Turnover**

Turnover is calculated over the last 12 months as the lesser of monthly purchases and sales divided by the average net assets.

**Yield to worst**

The lowest possible yield that can be received on a bond that fully operates within the terms of its contract without defaulting.

**Risk factors you should consider before investing:**

- **This material is not intended to provide investment advice or be considered a personal recommendation.**
- **The value of investments and income from them can go down as well as up and you may lose some or all of your initial investment.**
- **Past results are not a guarantee of future results.**
- **If the currency in which you invest strengthens against the currency in which the underlying investments of the fund are made, the value of your investment will decrease. Currency hedging seeks to limit this, but there is no guarantee that hedging will be totally successful.**
- **The Product Disclosure Statement (PDS) set out risks, which, depending on the fund, may include risks associated with investing in fixed income, derivatives, emerging markets, and/or high-yield securities; emerging markets are volatile and may suffer from liquidity problems.**
