KEY RISKS	
WHAT ARE THE KEY RISKS OF THIS INVESTMENT? The value of the product and its dividends or coupons may rise or fall. These risk factors may cause you to lose some or all of your investment:	Refer to paragraph 10 of the Singapore Prospectus for more information on product risks.
Market and Credit Risks	
• You are exposed to market risks as the Fund invests primarily in Equities. The prices of Equity securities may decline in response to certain events, including but not limited to those directly affecting the companies whose securities are owned by the	

Fund; conditions affecting the general economy; overall market changes; local, regional or global political, social or economic instability; and currency fluctuations. You are exposed to market risks in emerging markets. The prices of securities may decline in response to certain events, including but not limited to those directly affecting the companies whose securities are owned by the Fund; conditions affecting the general economy; overall market changes; local, regional or global political, social or economic instability; and currency fluctuations. The Fund faces a number of investment risks greater than those normally associated with investments in international securities. In particular, it may encounter settlement systems that are less well organised than those of developed markets. There may be risks that settlement may be delayed and that cash or securities belonging to the Fund may be in jeopardy because of failures of or defects in the systems or because of defects in the administrative operations of the counter-parties.			
Liquidity Risks			
The Fund is not listed and Shares can only be redeemed on each Valuation Date. There is no secondary market for the Fund. The redemption requests may be made to the Management Company through the transfer agent or appointed distributors in Singapore.			
Product-Specific Risks			
You are exposed to derivatives risks. Derivatives may expose the Fund to certain additional risks relative to traditional securities such as credit risks of the counterparty, imperfect correlation between derivatives prices of related assets, rates or indices, potential loss of more money than the actual cost of the investment, potential for leverage, increased volatility and reduced liquidity and risk of mispricing or improper valuation. You are exposed to China Interbank Bond Market risk & Bond Connect risks. Market volatility and potential lack of liquidity due to low trading volume of certain debt securities in the China Interbank Bond Market may result in prices of certain debt securities traded on such market fluctuating significantly. The Fund investing in such market is therefore subject to liquidity and volatility risks. You are exposed to OTC Markets risks. The Fund may invest in securities that are actively traded in an OTC market. Trading on such markets may involve higher risks than trading on official stock exchanges due to, in particular, lower market liquidity as well as lower investor protection in applicable regulations and available information. You are exposed to Shanghai-Hong Kong Stock Connect & Shenzhen-Hong Kong Stock Connect risks. Investing through the Shanghai-Hong Kong Stock Connect and Shenzhen-Hong Kong Stock Connect exposes the fund to numerous risks that could adversely affect it. Namely, quota limitations, legal beneficial ownership, clearing and settlement risk, suspension risk, differences in trading day, operational risk, regulatory risk, recalling of eligible stocks, disclosure requirements, no protection by investor compensation fund, conversion risk, trading costs and taxation.
